

Internship Task - Word Counter

What the project does

This project is a Word Counter tool built using Python. It reads a text document and counts the number of lines, words, and characters. This utility is helpful for writers, editors, and developers to analyze text content quickly.

How to run or test it

1. Save the code in a file named ``word_counter.py``.
2. Ensure there is a text file in the same directory, e.g., ``sample.txt``.
3. Run the script using a Python 3 interpreter:

```
`python word_counter.py`
```

4. The script will read the file and display the number of lines, words, and characters in the terminal.

Dependencies or instructions

This project requires:

- Python 3.x installed on your system

No additional libraries are required. It uses built-in Python file and string handling functions.
